

New UK space projects to boost global sustainable development to receive £3.4 million cash boost

The UK Space Agency (**UKSA**) today announced £3.4 million of new funding for ten leading-edge projects that back UK academics using space to tackle global development problems – from the spread of malaria to human trafficking and forced labour.

The £3.4 million funding comes from the UKSA's International Partnership Programme (**IPP**), which forms part of the Department for Business, Energy and Industrial Strategy's Global Challenges Research Fund. The IPP is designed to use UK space expertise in satellite technology and data services to deliver ground-breaking solutions to real-world problems across the globe to help developing countries while building effective partnerships that can lead to growth opportunities for the UK space sector.

The UKSA publishes a report summarising its midline evaluation of the existing IPP projects

The UKSA today published a summary of the midline evaluation which assesses how the IPP has been delivered and the impact of the existing IPP projects.
