

CanSat Talks

Bridging the gap between education and industry

The CanSat Competition run by ESERO-UK, invites senior school teams to conduct their own satellite launch mission. Teams' satellites are designed and built within the confines of a soft drink can. Students gain practical experience working on their own space project.

Alden Foundation supports CanSat and in conjunction with ESERO-UK, the Royal Aeronautical Society and the National Space Academy, we will be hosting monthly CanSat Talks with members of the space industry.

CanSat Talks

Alden Foundation invite leading figures from across the space industry to give accessible, insightful webinars to CanSat students about their own journeys.

This allows students to engage directly with a diverse range of people and roles in the space industry, and to ask about anything from technology to opportunities and careers in space.

Alden Foundation have been engaging with Allestree Woodlands School in Derby for several years in support of their work for the CanSat Competition, and we are now opening this up to other schools and CanSat teams.

→ CANSAT

Mentoring

We also seek to connect leading space industry professionals with schools and student groups who can act as mentors on their CanSat Competition project.

This allows students to benefit from their insights and experience on an on-going basis over the course of the competition.

Contacts

If you are interested in getting involved in the CanSat Competition please get in contact with a member of the CanSat Talks Team:

Joanne Wheeler (Alden Foundation):

- joanne.wheeler@wearealden.com

Rebecca Crawford-Richardson (ESERO-UK):

- r.crawford-richardson@stem.org.uk

Tom Lyons (ESERO-UK):

- t.lyons@stem.org.uk

If you would like further details about Alden Foundation's student engagement program or wish to engage with us, please contact joanne.wheeler@wearealden.com

Please see our policy for more information about our guidelines for schools and speakers.
